## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-22, drawn to a method for enhancing the radiosensitivity of a neoplastic cell comprising contacting compound structure A, classified in class 514, subclass 410+.
- II. Claims 23-33, drawn to a method for treating a neoplastic growth comprising administering compound structure A, classified in class 514, subclass 410+.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects since Group I is related to enhancing the radiosensitivity of a neoplastic cell while Group II is related to treating a neoplastic growth.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Further the required non-patent literature search for Group I is not required for Group II and the examination of both independent and distinct invention would place burden on the Examiner.

Art Unit: 1617

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Further restriction may be required.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer Kim whose telephone number is 703-308-2232. The examiner can normally be reached on Monday through Friday 8:30am to 5pm.
